

ECCO GOLF TRAY

Sneaker-style cupsole, created with ECCO FLUIDFORM™ Direct Comfort Technology, with the TPU tray offering lateral stability and comfort, as well as adding to the modern look

An innovative spin on the award-winning ECCO DYNAMIC TRACTION SYSTEM™ outsole, called E-DTS™ TWIST, offering multi-directional traction and featuring slightly larger cleats in high abrasion areas

Premium ECCO Leather is developed in the brand's own tanneries with the pioneering DriTan™ technology that significantly reduces the amount of water needed for the tanning process

FEATURED TECHNOLOGIES

ECCO BIOM® NATURAL MOTION® is based on the natural shape and movement of the foot. Its key element is an anatomical last, created from the knowledge gained from studying 2,500 individual foot-scans. Add to that a low-to-the-ground construction, reduced seam and easy flexibility that allows you to move with ease and efficiency at tee-off – and several hours later.

ECCO FLUIDFORM™ Direct Comfort Technology is a state change process where a fluid, lightweight material is injected into a shoe mould to form a solid, shock-absorbent sole. Using our proprietary state-of-the-art lasts – engineered to deliver both high levels of comfort, following the anatomy of the human foot, and contemporary, versatile styles – FLUIDFORM™ provides an exceptional fit-and-feel that stands in stark contrast to the hard, flat sole parts of conventional shoemaking techniques. Together with this fine-tuned balance of cushioning and rebound, FLUIDFORM™ also ensures an integral, supple bond between the upper and the sole, without any glued or stitched assemblies, which leads to reliability and durability that is sure to stand the test of time.

With three levels of rigidity, **ECCO ZONAL FLUIDFORM™**, the unique features of this milestone technology cater to the style of the individual golfer:
ZONE 1: The forefront of the midsole provides a high level of softness for walking comfort.
ZONE 2: The firmer middle part of the midsole ensures outstanding lateral stability throughout the swing.
ZONE 3: The medium softness of the heel part ensures cushioning and comfort.

ECCO DYNAMIC TRACTION SYSTEM™ (E-DTS®) is an award-winning hybrid outsole design that provides more than 800 traction angles for excellent grip in all playing conditions. Constructed from highly durable, wear-resistant Thermoplastic Polyurethane (TPU) and consisting of approximately 100 moulded traction bars, the sole unit is extremely lightweight, flexible and shock absorbing. Its low profile brings the golfer closer to the ground for great stability, ground feel, traction and swing power.

Utilising innovative zone technology, **ECCO MTN-GRIP** is engineered to support every aspect of your golf game. With three different zones – one for stability, another for durability and the third for rotational support – the outsole assists you from backswing to follow-through. Two TPU elements on the side are providing lateral stability and are linking the sole unit to the lace system via X-TENSA INVISIBLE Technology, an internal enforcement for additional stability. Thanks to its durable TPU construction, ECCO MTN-GRIP can be enjoyed on and off the fairways.

GORE-TEX is a highly breathable and 100% waterproof membrane that keeps feet dry and comfortable in all conditions. By integrating GORE-TEX into our uppers before carefully sealing them, we prevent external moisture from penetrating, while also allowing natural moisture to escape.

GORE-TEX SURROUND® is engineered to keep feet dry and ventilated in all conditions and provides 360° climate comfort by keeping water on the outside while enabling perspiration to easily escape from the inside.

A STEP TOWARDS IMPROVED SUSTAINABILITY
As part of a commitment to continually challenge the status quo, ECCO Leather has taken a big step towards reducing the water it uses in its tanneries. While saving approximately 20 litres of water per hide, the DriTan™ technology also produces leather which is indistinguishable from traditionally tanned leather in terms of quality, characteristics, stability and lead-time.

ECCO GOLF SS21

ECCO GOLF BIOM® H4

Natural motion, stability and control with BIOM® 2.0 technology that offers low-to-the-ground footing, anatomical support and a glove-like fit

The innovative new ECCO MTN GRIP outsole has three different zones for stability, durability and rotational support throughout the swing

TPU element wraps around the foot from the outsole to the midsole, providing stability while elevating the modern, premium design
